What this rests on

WHERE THIS COMES FROM

Nothing was found in the three kinds of document this report is built from — workplace inspections, accident investigations, and annual filings. Outside the United States that is usually a gap in what is *published*, not a gap in what happened. So rather than show you an empty page, the section marked with an asterisk below sets out what is openly written about your organisation. It is a starting point for a conversation, not a record, and we say so plainly wherever it appears.

Nothing here was uncovered. All of it was already published — by a regulator, by an investigator, or by you. The only work done was putting it side by side. It is free, it stays free, and it contains no assessment of your competence, no attribution of cause, and no individual's name.

About Reliance (RIL)

Reliance Industries Limited is an Indian multinational conglomerate headquartered in Mumbai. Its businesses include energy, petrochemicals, natural gas, retail, entertainment, telecommunications, mass media, and textiles. Reliance is the largest public company in India by market capitalisation and revenue, and the 88th largest company worldwide. It is India's largest private tax payer and largest exporter, accounting for 7% of India's total merchandise exports.

Background from the public record — source. It is here so the rest of this document has something to sit against, and it is not part of the safety record.

What we can see from here

Your organisation does not appear in any safety register we can reach, so there are no counts to show. This is what is openly written instead — an indication of what to ask about, not a record of what happened.

publicly written accounts

Petrochemicals
line of work

India
where they are from

How we looked, and what this is worth.

We searched the workplace regulator, the accident investigators, and the annual filings, and found no entry for you. Outside the United States that is usually a gap in what is *published*, not a gap in what happened — most countries do not put inspections online at all. So nothing below is counted, nothing forms a pattern, and nothing here is a claim about your organisation. Read it as a starting point for a conversation.

WHAT YOU ARE BUILDING

Publicly reported, and the reason this conversation is timely rather than merely accurate.

Masterstroke by Mukesh Ambani as Reliance Industries invests Rs 150000000000 in new energy venture, company t

Reliance To Build Green Energy Giga Complex Spread Across 5,000 Acres in Jamnagar
Reported by Saur Energy. Shown because of what it implies about the work ahead, not as a fact we have proven.

Reliance Industries signs MoU to invest Rs 645 cr in Vadhvan port project
Reported by business-standard.com. Shown because of what it implies about the work ahead, not as a fact we have proven.

THE CLEAREST OPENING

Practise it before the day

Never practised IS CLOSED BY **Genesis + EON Universal**

Nothing in the reachable record points at one of the seven in particular, so start where every operation starts: people meeting equipment and procedures for the first time.

BECAUSE YOUR RECORD SHOWS

- nothing yet on this

AND BECAUSE YOUR OWN FILING SAYS

- nothing published on this

Thin Case.

This is the foundation rather than a finding. Nothing has been proven about this organisation — it is where the conversation begins when the public record is silent.

All seven, with the evidence behind each →

In one page

Everything below is traceable to a public source. Nothing is inferred.

0	$0	0
citations	in penalties	investigated accidents

WHAT THE RECORD SAYS

1. No conclusive pattern is claimed. That is a statement about the public sources, not about how safely the site is run.

> **No conclusive pattern**
>
> No conclusive pattern can be drawn from this record. That is a statement about what the public sources say, not a statement that the operation is safe.

The shape of the record

Counted, not interpreted. These are totals, not conclusions.

BY THE JOB BEING DONE

Nothing to chart — no record states what job was being done.

HOW THE REGULATOR CLASSIFIED THE CITATIONS

No citations in the window examined.

0	$0	0	0
citations	penalties	accidents investigated	deaths

What happened

The regulator's own account, quoted in full. We have not summarised or characterised any of it. The regulator identifies people only by number.

No accident narratives were found for the confirmed inspections in this window.

The record

Every item that passed the standard of proof: two independent public sources, or one regulator, official investigator, or the organisation's own disclosure.

DATE	WHAT THE SOURCE SAYS	SOURCE

The Seven

Seven sentences that appear again and again in accident investigations. Your public record does not speak to any of them — which is usual where inspections and investigations are not published. They are set out here as they appear in investigations everywhere, so you can see which ones you recognise.

01

NEVER PRACTISED

> *"The crew was doing this procedure for the first time, at the equipment."*

YOUR RECORD IS SILENT

NOT YOU — YOUR SECTOR

In upstream oil and gas in 2024 there were 32 fatalities across 21 incidents, and 26 of those 32 were contractors — people who did not write the procedure and had the least standing to stop the job.

IOGP, Safety Performance Indicators, 2024 data.

When a crew meets one of these jobs for the first time, where do they practise it before the day?

Closed by Genesis + EON Universal

02

LOST EXPERIENCE

> *"The person who knew how to do it that way retired in March."*

YOUR RECORD IS SILENT

Nothing in the public record speaks to this. Only you can answer it.

When the person who knew how this was done retires, what happens to what they knew?

Closed by EON Tacit

03

WHEN THINGS GO WRONG

> *"They have only ever practised it going right. Nobody rehearses the bad day."*

YOUR RECORD IS SILENT

NOT YOU — YOUR SECTOR

Crew resource management — who speaks, who is heard, and how the job is handed over — was a factor in 57% of those fatal accidents.

International Journal of Occupational Safety and Ergonomics, Nwankwo, Arewa, Theophilus, Esenowo, 28(3), 2022. Presence rate, not a share of causes.

Where does a crew rehearse the day that goes wrong, rather than the day that goes right?

Closed by Situation Room + EON Live

04

TOLD, NOT TESTED

> *"We told them, but we never verified they could actually do it."*

YOUR RECORD IS SILENT

NOT YOU — YOUR SECTOR

Skill-based error — the hand that slips, at equipment the person had not worked on before — was a factor in 53% of those fatal accidents.

International Journal of Occupational Safety and Ergonomics, Nwankwo, Arewa, Theophilus, Esenowo, 28(3), 2022. Presence rate, not a share of causes.

How would you show a regulator that someone can do this job, rather than that they were told about it?

Closed by Assess IQ + Competence IQ

05

THE PLAN DIDN'T MATCH THE JOB

> *"The permit did not cover the entire job, and nobody verified the isolation."*

YOUR RECORD IS SILENT

NOT YOU — YOUR SECTOR

In the same set of fatal accidents, organisational process — how the work was planned and authorised — was a factor in 86% of cases.

International Journal of Occupational Safety and Ergonomics, Nwankwo, Arewa, Theophilus, Esenowo, 28(3), 2022. Presence rate, not a share of causes.

06

NO GUIDANCE IN THE MOMENT

> *"He skipped a step, on the wrong asset, and nobody saw it."*

YOUR RECORD IS SILENT

NOT YOU — YOUR SECTOR

In upstream oil and gas in 2024 there were 32 fatalities across 21 incidents, and 26 of those 32 were contractors — people who did not write the procedure and had the least standing to stop the job.

IOGP, Safety Performance Indicators, 2024 data.

When someone is at the wrong asset, or about to skip a step, what tells them at that moment?

07

THE SAME MISTAKE AGAIN

> *"It happened before. Nothing changed. So it happened again."*

YOUR RECORD IS SILENT

NOT YOU — YOUR SECTOR

Unplanned downtime costs an average offshore facility around $38 million a year, and over $88 million at the worst performers.

Kimberlite International Oilfield Research, Offshore operator benchmark, 2023. Offshore benchmark. Do not present as an onshore figure.

When something goes wrong and gets fixed, what makes sure the fix reaches everyone else doing that job?

When the permit and the job diverge on the day, who notices, and what happens next?

Closed by Field IQ / Edge

Closed by Compound IQ + Distillery

What is happening now

The record above looks backwards. This looks at what is live today — the reason a conversation is timely rather than merely accurate.

NOT YET VISIBLE TO THIS REPORT

These are the strongest reasons to make contact and none of them are incidents. A new site needing thousands of trained people produces no safety record at all.

Turnaround coming

Thousands of contractors arrive at once, most of whom have never seen the plant.

Would come from: Company filings, investor calls, trade press

New plant or major project

A new site must train hundreds or thousands of people fast. Produces no incidents at all — invisible to a backward-looking report.

Would come from: Press releases, permits, capital announcements

Hiring trainers or assessors

They are trying to fix competence by hand, which means they know it is a problem.

Would come from: The company's own careers pages

A new HSE or training leader

A new leader wants a visible win in the first ninety days.

Would come from: Public appointment announcements, press

Workforce retiring

Know-how walking out of the gate with nothing capturing it.

Would come from: Workforce disclosures, sector age data

In your own words

This organisation files no annual report with the SEC — it is private, foreign-listed, or a subsidiary that reports through a parent. Nothing in this section could be read.

What is publicly written*

*** This is not an official record.**

Everything above comes from a regulator, an investigator, or your own filings. This section does not. It is what has been publicly written about your organisation, shown because the official record we can reach is thin — which for operations outside the United States is usually a gap in what is published, not a gap in what happened. Nothing here is treated as proven, none of it is counted, and none of it forms a pattern.

PUBLICLY WRITTEN ACCOUNTS

workers killed

Listed because each names your organisation. Whether any of it is accurate, current, or fairly described is for you to say — and we will correct anything you show us to be wrong.

How this was made, and what it cannot do

THE STANDARD OF PROOF

An item is included only where a regulator, an official investigation body, or the organisation's own disclosure states it, or where two independent public sources agree. Trade press can corroborate a claim; it can never establish one. Items that fail are dropped, not softened.

WHAT THIS REPORT NEVER CONTAINS

- No attribution of cause where an investigation has not concluded.
- No individual's name. Roles only.
- No information from any EON customer. Public sources only.
- No assessment of your competence.
- No EON product content of any kind.

WHAT IT CANNOT DO

- Two sources are read: the US workplace-safety regulator and the federal chemical investigator. Environmental and pipeline records are not included in this version.
- Enforcement records state that violations occurred, not what job was being done. Where an accident was investigated, the job comes from the regulator's own keywords rather than from our reading.
- No job family reached 3 events in this window from the sources read. That is a statement about this record, not a statement that the company is safe.
- No accident narratives were found for the confirmed inspections in this window, so section three is empty.
- Because the official record was thin, this report also shows what is publicly written about the organisation. That section is marked, and none of it is treated as proven.

HOW IT WAS BUILT

- Annual report: nothing named "Reliance (RIL)" is registered with the SEC. Privately held and many foreign operators are not, so there is no annual report here to read.
- OSHA: 0 inspection(s) found across 1 search term(s), 2015-2024.
- OSHA: 0 confirmed inspection(s) carried citations and became claims.
- CSB: 0 published items indexed; 0 mention this company.
- CSB: 0 confirmed publication(s) became claims.
- HSE: 210 prosecutions in the register.
- HSE: 7 prosecutions of individuals were not read. This report never names a person.
- HSE: no prosecution in the register is attributable to this organisation.
- Narratives: 0 accident account(s) retrieved from 0 inspection(s); 0 involved a death.
- Sorter: 0 of 0 event(s) could be tied to a specific job.
- Open information: 1 publicly written account(s) found. These are NOT official records and never enter the proven record.
- Press: 1 reported account found. None is treated as proven.
- Press: 4 accounts of what they are building or hiring for.

SOURCES

If anything here is wrong, we will correct it.

Show us and we will fix it, reissue the report, and record the correction publicly. That offer is what makes this document worth reading.

Status of this copy: **not reviewed**. No person has yet checked every claim in it against its source.
